

What is claimed:

1. [canceled]
2. [canceled]
3. [canceled]
4. [Canceled]
5. [currently amended] [[Monolithically formed]] A one piece reflective [[temporary]] roadway marker comprising:
  - an upper resilient segment having an interior planar surface with raised, beaded periphery edges; [[, and]]
  - a lower rigid body segment having a top planar portion, one inclined reflective face, two arcuate sides, a planar base surface and a backside forming a perpendicular angle with respect to said base surface, said backside can be provided with thin ties for interlocking with the backside of a second marker;
  - [[means for integrally fabricating multiple]] a plurality of cube corner reflective elements within the interior surfaces of the upper resilient segment [[defined by said periphery edges in said]] and within the interior of a designated cell like areas within said inclined reflective face [[s of said]] of the lower rigid body segment; and
  - [[means for integrally providing]] a plurality of walls for partition and structural support within [[each]] said lower rigid body segment, said walls [[means]] disposed rearward starting at the periphery of said designated interior cell like surfaces of the reflective face, thereby defining multiple hollow cavity air gaps beneath said cube corner reflective elements, [[and providing the space needed for ejecting the entire molded pavement marker]] said hollow cavity air gaps each having a centerline that form an angle of about 80 to 120 degrees with respect to the corresponding outside planar reflective face, said hollow cavity air gaps having one row of open ends at the planar base surface and [[the]] an upper row of open ends at the vertical backside of said lower body.

6. ~~currently amended~~ ] ~~[[The monolithically formed]]~~ The one-piece reflective ~~[[temporary]]~~ roadway marker ~~[[as defined in]]~~ of claim 5, wherein two of said one-piece ~~[[temporary]]~~ roadway marker are ~~[[sonically welded]]~~ agglutinated at the upper beaded periphery edges and the lower vertical backsides, thereby forming a two-way reflective roadway marker, ~~[[ roadway marker can have the]]~~ said upper resilient segment ~~[[formed with]]~~ integrally tied to said lower body with thin portions that can be tearable from said body ~~[[ties]]~~, thereby retaining said lower body segment adherent to the pavement as permanent reflective marker.
7. ~~[[original]]~~ The one-piece reflective roadway marker of claim 5, wherein said open ends of hollow cavity air gaps within the planar base surface can be sealed with a compatible polymeric capping sheet, wherein a pressure sensitive adhesives pad can be applied to secure said reflective marker to the roadway surface.
8. ~~canceled~~
9. ~~canceled~~
10. ~~canceled~~
11. ~~canceled~~
12. ~~canceled~~
13. ~~canceled~~
14. ~~[[original]]~~ The one piece reflective roadway marker of claim 5, wherein the outside surface of the reflective face can receive an abrasion resistant resinous coating composition, said resin coating composition being selected from several suitable out sources with readily formulated products with high abrasion resistant coating composition.
15. ~~[[original]]~~ The one piece reflective roadway marker of claim 5, wherein an opaque color additive can be added to a hard abrasion resistant resin composition for coating the body portions of said reflective roadway marker outside surfaces, said hard colored topcoat provides an abrasive resistant and durable surface, said outside surfaces having one color or two opaque color segments.
